Laser Therapy has been scientifically proven to be successful in treating post-surgical pain and many acute and chronic conditions.

What will my pet feel?

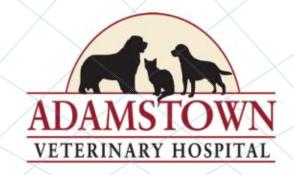

Patients do not need to be sedated or restrained, and your pet most likely will not feel the laser treatment.

Human patients will often say they feel a pleasant tingling at the treatment site, but laser therapy causes no heating or burning.

Soon after the first treatment, your pet may move with less pain or have a more relaxed stride and better range of motion.

Often a series of treatments will be necessary, but the healing process begins right away. As a noninvasive treatment with no side effects, laser therapy is ideal for treating post operative patients, and can be used to treat long-term, degenerative conditions instead of pharmaceuticals.

Alleviate your pet's everyday aches and pains with

Laser Therapy

Drug free.
Surgery free.
Relief for your pet.

What is Laser Therapy?

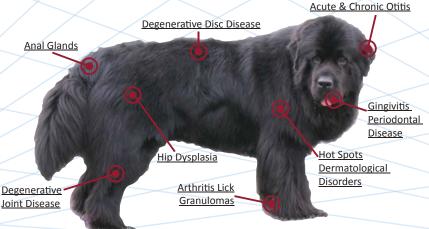

Laser therapy is an affordable, surgery free, drug free, noninvasive treatment to reduce pain, reduce inflammation, and increase speed of healing.

Class IV Deep Tissue Laser Therapy uses a beam of laser light to penetrate tissue deeply without causing damage to it. Laser energy induces a biological response in the cellscalled "photo-bio-modulation", which leads to reduced pain, reduced inflammation, and quicker healing.

Any condition that causes swelling and pain can be treated with laser. Most treatments take from 3-8 minutes, and are frequently conducted in conjunction with other forms of rehabilitation therapy.

"The laser treatment for my
16 year old Beagle's chronic
neck issues and arthritis has
been remarkably effective
in improving his quality of life.
Positive results were noticed
by the second treatment."
-Scott Kuykendall

"To me it was a miraculous healing process and having had Golden Retrievers in the past with skin issues, I feel that the laser therapy cut the healing time by two-thirds and continued to heal without the use of steroids.

-Barbara Emmett

Acute Conditions:

- Wounds
- Allergies
- Infections
- Cuts/Bites
- Inflammations
- Tooth Extraction Pain Relief
- Sprains, Strains & Fractures
- Post-Surgical Healing & Pain Relief

Chronic Conditions:

- Degenerative Joint Disease
- Inflammatory Bowel Disease
- Periodontal Disease
- Lick Granulomas
